

## RULE BILGE PUMPS

### The World's Leading Submersible Pumps – Keeping Your Bilge Dry Since 1960s

Rule bilge pumps are the #1 choice for boat owners worldwide, backed by over 50 years of innovation and proven performance in harsh marine conditions. From small runabouts to offshore cruisers, Rule delivers reliable, efficient water removal so you can focus on enjoying the water.

#### Top Benefits of Rule Bilge Pumps:

- **Superior Efficiency at True 12V** — Next-generation DA-series models (360–1100 GPH) achieve full rated flow on standard 12V systems (no need for 13.6V), saving battery power and delivering more performance with less draw.
- **Built-in Safety & Protection** — Thermal Cut-Off (TCO) prevents overheating, protecting your pump and vessel. Many models include non-return backflow prevention to keep bilges drier and cleaner.
- **Hassle-Free Installation** — Anti-airlock vents eliminate locking issues in tricky plumbing. Flexible straight or 90-degree ports adapt to any boat layout.
- **Durable & Low-Maintenance** — Marine-grade construction resists corrosion. Easy-clean snap-lock strainers on higher capacity models. Silent, vibration-free operation for comfort underway.
- **Run-Dry Safe (Short Periods)** — Robust motors on all models handle occasional dry running without damage.
- **Proven Reliability** — Rule is the benchmark brand trusted by boat builders, commercial operators, and recreational boaters alike.

Whether you're protecting a small tinnie or a large launch, there's a Rule pump to keep your bilge bone-dry and your adventures worry-free.

Part No	Model	Capacity (GPH)	Volts (DC)	Discharge Outlet
