# Motor Mounts

Upgrade your outboard installation with **Boat Dek Outboard Motor Mount Pads**, the perfect solution for protecting your **transom** and improving your **outboard motor mount** performance.

Designed for use on **aluminium and fiberglass boats**, each pad is crafted from **10mm high-density Co-Polymer material**, providing a tough and durable **insulating barrier** between the outboard bracket and the boat's transom surface. This barrier reduces engine harmonics and vibration, acting as an effective **vibration stop** to extend the life of your outboard mount and transom.

The pads also serve as **transom protectors**, preventing **galvanic corrosion** when fitting an outboard to different substrate materials. With a **PSA (pressure-sensitive adhesive) backing**, installation is quick and clean — simply **peel and stick** for a professional finish.

Suitable for **most outboard motor brands**, these **multi-fit transom plates** are ideal for new builds, repowers, or upgrades, helping to ensure a secure and long-lasting installation on any **outboard motor mount** setup.

### Features:

- Constructed from durable 10mm high-density Co-Polymer material
- Compatible with aluminium and fiberglass hulls
- Creates an insulation barrier between outboard bracket and transom
- Reduces vibration and engine noise – effective vibration stop
- Prevents galvanic corrosion and paint damage
- PSA backed for easy peel-and-stick installation
- Multi-fit design for most outboard motors and brackets

**Part Number:** BDMOTORM
